BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

DETAILED ACTION

Claim Objections

- 1. Claim 35 is objected to because of the following informalities: In the second line of the claim, the word "to" should be deleted and substituted with "in" in order to improve the claim language. Appropriate correction is required.
- 2. Claim 41 is objected to because of the following informalities: In the second line of the claim, the word "of" should be substituted with "or". Appropriate correction is required.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 30-50 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. Claim 30, from which the balance of the claims depend, recites that "10 to 70 percent by weight of ... monomers having a Tg above 30°C" are to be contained in the monomer mixture, however this limitation is repugnant to the usual meaning of Tg since Tg is a property of a polymer and no a property of any monomer or any mixture of

Application/Control Number: 09/744,088

Page 3

Art Unit: 1713

monomers. Applicant's claimed "at least one nonionic" monomer renders the claims indefinite.

Further, claim 38 recites Tg's as limitations for a monomer.

- 6. Claim 37 recites the limitation "the process in claim wherein", however it is unclear which claim(s) this claim is referring to or dependent from. There is insufficient antecedent basis for the limitations in the claim.
- 7. In addition, Claim 50 provides for the use of the latex particles of claim 46, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim Rejections - 35 USC § 101

8. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 50 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

10. Claims 30-50 are rejected under 35 U.S.C. 102(b) as being anticipated by Hoshino et al. (EP 426391).

In page 2, lines 47-53 and page 4, lines 10-13 and 37-47, Hoshino et al. teach a process for preparing an aqueous dispersion of core-shell polymers, with particle sizes from 0.1 to 5.0 µm (100 to 5000 nm), formed in the presence of a surfactant from a mixture comprising of 40 to 98 percent by weight of monomers for the shell polymer (B), which has a Tg preferably above 50°C, and 2 to 60% percent by weight of hydrophilic monomers for the core, wherein the monomer mixture comprises monomers such styrene and acid (anionic) monomers such as (meth)acrylic acid. The core and shell are polymerized in sequence and the core polymer acts as a seed for the shell polymer.

In page 5, lines 14-17, Hoshino et al. teach that latex particles are formed by drying the dispersion and the hydrophilic inner phase of the core-shell particles is taught to be alkali soluble in order to allow for the generating of pores.

Thus, the requirements for rejection under 35 U.S.C. 102(b) are met.

Art Unit: 1713

11. Claims 30-50 are rejected under 35 U.S.C. 102(b) as being anticipated by Blankenship (EP 696602)

In col. 1, line 53 to col. 2, line 12 and col. 3, lines 25-36, Blankenship teaches a process for preparing an aqueous dispersion of hydrophilic core-hydrophobic shell polymers formed in the presence of a surfactant (in an emulsion), wherein the core comprises 5 to 100% of hydrophilic acid monomers, such as (meth)acrylic acid, the balance of the core being nonionic monomers such as styrene, and wherein the shell comprises 1 to 10% of acid functional monomers, the balance of the shell being nonionic monomers such as styrene. The core and shell are polymerized in sequence and the core polymer may be prepared in the presence of a seed latex.

In col. 7, lines 29-43, Blankenship teaches that dry particles, with total particle sizes from about 70 nm to 4500 nm, are formed by drying the dispersion, and the hydrophilic inner phase of the core-shell particles is taught to be alkali soluble in order to allow for the generating of pores.

Thus, the requirements for rejection under 35 U.S.C. 102(b) are met.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Kelechi C. Egwim whose telephone number is (703) 306-5701. The examiner can normally be reached on M-T (7:30-6:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on (703) 308-2450. The fax phone numbers for
